FERTIUM STORE Ca

ACTIVE CALCIUM SOLUTION THAT PREVENTS ITS DEFICIENCY AND IMPROVES THE QUALITY OF CROPS.

Fertium Store Ca is a liquid fertilizer based on activated calcium that, thanks to the XILACAL complex, manages to enhance the assimilation and mobility of calcium inside the plant, allowing it to be transported to areas of high demand.

Furthermore, Fertium Store Ca improves the characteristics of the soil and its fertility, since it manages to displace salts from the bulb area, improving its conductivity. In the same way, it has an effect on the clay-humic complex, improving its structure and functioning, which increases its capacity to store nutrients and make them available to the crop.

Calcium oxide (CaO) soluble in water

Fertium Store Ca

5% (5,5%)

Dose and mode of use

It can be applied to all crops, adjusting its dosage according to the crop's calcium needs and its sensitivity to deficiencies of this element.

Application through irrigation water

As a guide, between 15-20 l/ha and application can be used. It can be applied to all crops, adjusting its dosage to the vegetative state of the crop and the conditions observed.

Application through irrigation water

As a stimulant and corrector, between 3-4 l/ha. It is recommended in water concentration between 300-400 cc/hl. Its application is carried out mainly in the first phases of cultivation.
