FERTIUM HUMIPOL

WATER-SOLUBLE HUMIC AND FULVIC ACIDS

Fertium Humipol is a product with a **high content of soluble humic acids** derived from leonardite, that increases the assimilation of mineral nutrients and improves the structure of the soil. Humipol gives the soil the ability to retain water and fertility, by forming micronutrient complexes, thus avoiding nutrient deficiencies, while stimulating root formation and increasing crop productivity.

Fertium Humipol contains **Prolife® technology** that provides essential micronutrients for the development of rhizosphere microorganisms, enhancing their development and activation.

	Total Humic Extract	Fulvic acids	Humic acids	K ₂ O	pH
Fertium humipol	66%	9%	57%	15%	9,8

Recommended doses	Soil application
Vegetables	10-15 Kg/Ha
Berries	10-15 Kg/Ha
Citrus	15-20 Kg/Ha
Ornamental	10-15 Kg/Ha
Tropical crops	10-20 Kg/Ha
Fruit trees	10-20 Kg/Ha

Packaging

1Kg, 5Kg

Inputs usable in Organic Plant Production in accordance with Standard UNE 142500:2017, on the production of fertilizers, amendments and growing substrates
